

In marital status change, voucher creation should be provided on confirm functionality only & need not be a separate option. It needs to be done as per ITM.

Proposed System:

In brow window, select the transaction which is to be approved. Right click on the transaction; user will see one option "Confirm". By clicking on "Confirm" button, new window will get opened similar (Not exact) to bellow.

In below screen , user will have to select whether voucher is to be generated or not and then click on process button. System will confirm the transaction and will generate voucher only in case generate voucher is selected “Yes”
