Dear Nazia,

Please log the attached request in system as per bellow detail:

Parent CCF: IT2016-047
Parent Request ID: A16ESUN001
Project: SUNADM001
Module: HR Admin
Menu Reference: Employee Master

Description:

System should allow to map functional group and business unit at employee level. Currently system these functionality is mapped at department level.

System should allow blank in business unit. If business unit is specified then it should get validated against business unit master. Business unit should get stored at employee level. System should display head of respective business unit from business unit master

System should allow blank in functional group. If functional group is specified then it should get validated against business function master master

System should not allow to edit parent department. Parent department should get populated from department master based on based on sub department code and should get stored in employee master.

Approx. Projected Efforts: 24 Hours

Regards
Piyus
